About Me

Dynamic and detail-oriented MERN Stack Developer with a strong foundation in full-stack development, specializing in designing and building scalable, high-performance web applications. Passionate about problem-solving, optimizing code efficiency, and ensuring seamless user experiences. A proactive team player with strong analytical thinking and collaboration skills, dedicated to writing clean, maintainable, and efficient code

Educational Background

IES College of Engineering, Thrissur, Kerala

B.Tech in Computer Science, CGPA: 7.00

Experience

Prototype, Kochi

Web Developer Intern

- Developed two major projects an AI-powered Multi-Vendor E-Commerce App, an AI Chatbot, and a Real-Time Chat Application using Socket.io and React along with four additional mini projects.
 - Gained expertise in MVC, Clean Architecture, Repository Pattern. SOLID Principles.
-

Projects

E-Commerce Multi Vendor (gocart-setup-rust.vercel.app)

Tech Stack: Node.js, PostgreSQL(Neon), Express, React.js, Tailwind CSS, Clerk,Stripe

- Built a multi-vendor marketplace where users can create and manage their own online stores.
- Implemented secure user authentication and session management using Clerk.
- Admin panel includes functionalities for store approval, coupon management, and platform-wide analytics.
- Features a complete shopping cart, order tracking, and customer address management system.
- Utilizes Inngest for handling reliable background jobs, such as sending notifications or processing events.
- Incorporates an AI feature using the OpenAI API, likely for automated content generation for stores.

AI Chat Application (fast-gpt-frontend.vercel.app)

Tech Stack: React js, OpenAI, ImageKit.

- Developed a full-stack web application providing users with a real-time, conversational interface powered by the OpenAI GPT API.
 - Implemented a robust user authentication system from scratch using JWT for secure sessions and bcryptjs for password encryption.
 - Designed a credit-based usage system to manage and monetize API interactions, tracked through a MongoDB database.
-

Technical Skills

- **Languages & Databases:** JavaScript, TypeScript, C, SQL, PostgreSQL, MongoDB.
 - **Frontend:** React.js, Next.js, React Query, Tailwind CSS, Bootstrap, ShadCN, Zustand.
 - **Backend:** Node js, Express.js, REST API, OAuth, Socket.io.
 - **Tools:** Git, Github, Postman, AWS, CI/CD Pipeline, Web Hosting, Figma.
 - **Architecture:** MVC, SOLID Principles, Layered, Repository.
-
